

1. 메타 호라이즌 가입 및 개발자 인증 (핸드폰 필요)

- <https://developers.meta.com/horizon/manage/organizations/936019972919936/>

2. Meta Horizon 앱 설치 (핸드폰)

- 위에서 가입한 계정으로 로그인
- 아이폰, 안드로이드 다 됨

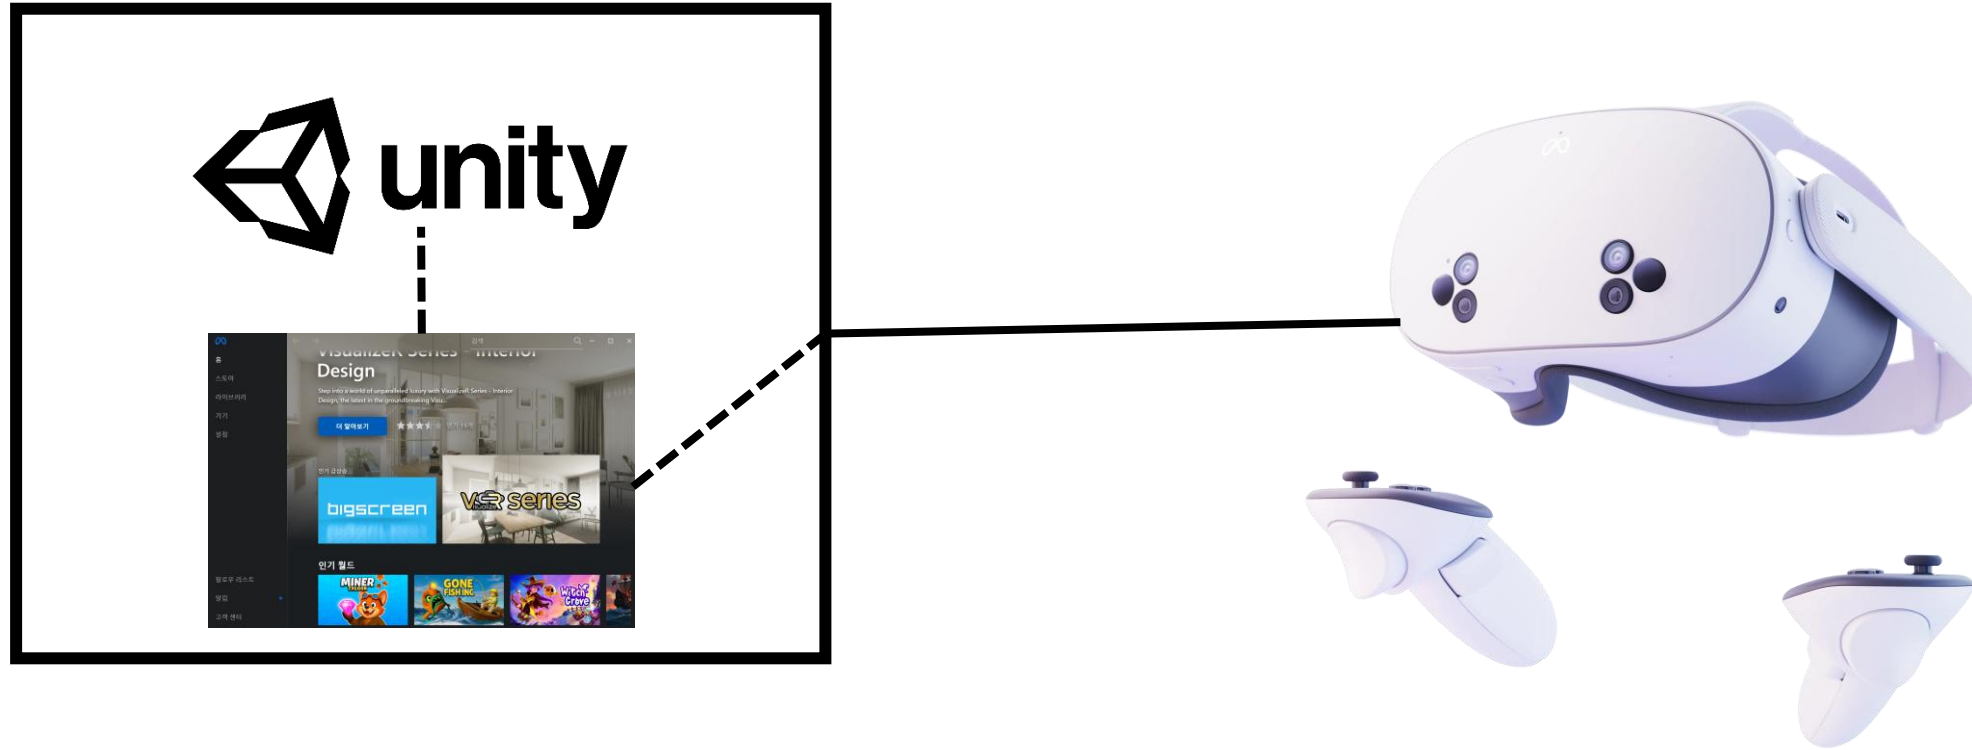

3. 메타 퀘스트 링크 어플리케이션 (데스크탑에)

- Windows만 됨

환경 설정 개요도

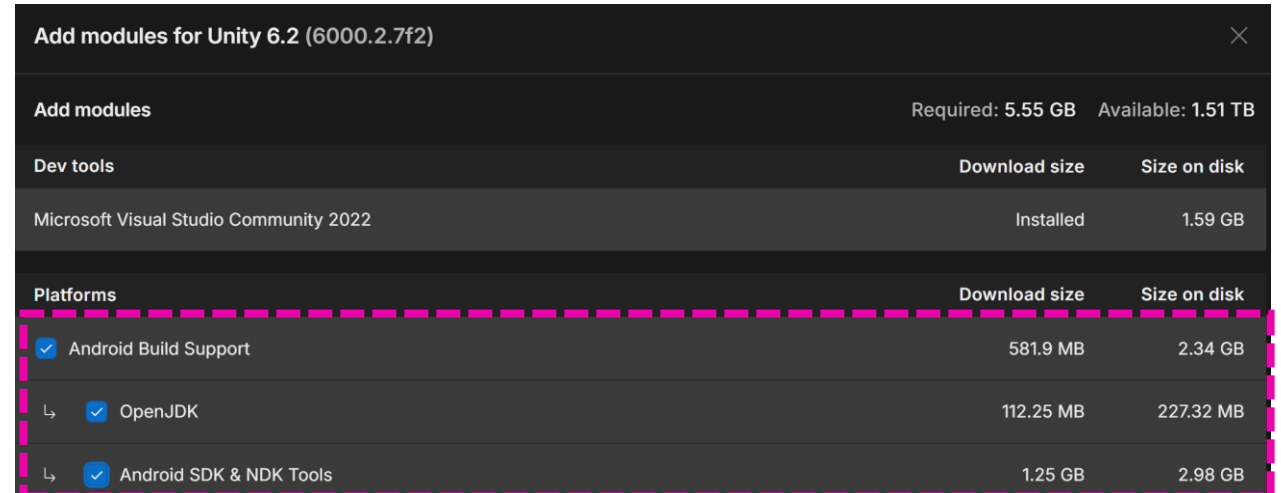

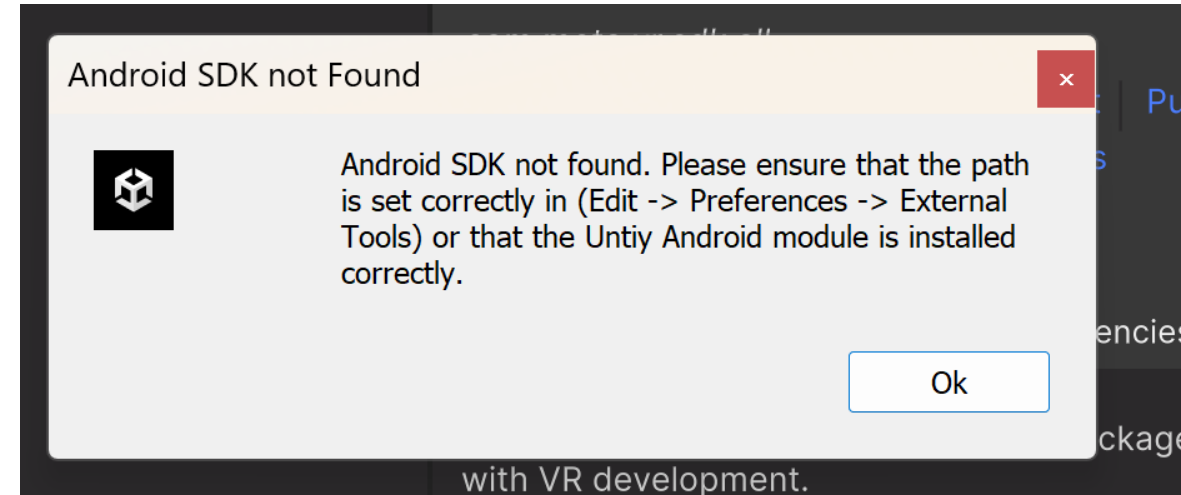

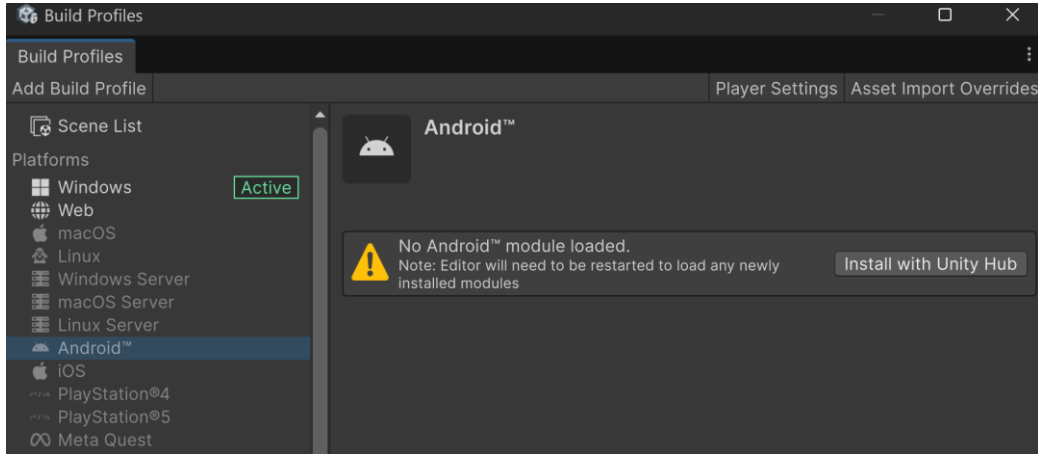

기기 설정

- 핸드폰과 페어링
 - Wi-Fi에 연결 후
- 기기 설정
 - 해당 기기의 개발자 모드 ON
 - 페어링 된 앱에서 조작

안드로이드 설치

- Build Profile에서
 - Android 설치

안드로이드 설치

- 유니티 허브에서도 설치 가능
 - Install -> Manage -> Add Modules

The screenshot shows the Unity Hub application interface. On the left is a dark sidebar with the 'Hub' logo and navigation links: 'Get set up', 'Projects', 'Installs' (which is highlighted), 'Learn', 'Resources', and 'Licenses'. The main area has a dark background. At the top, a blue notification bar states 'Hub update available v3.15.2 is now available and will install after restarting.' with buttons for 'Dismiss', 'See release notes', and 'Restart now'. Below this, the 'Installs' section is active, featuring a search bar and 'Locate' and 'Install Editor' buttons. There are three tabs: 'All' (selected), 'Official releases', and 'Pre-releases'. Under the 'All' tab, the heading 'UNITY 6' is visible. A single installation entry for 'Unity 6.2 (6000.2.7f2)' is shown, with its file path 'C:\Program Files\Unity\Hub\Editor\6000.2.7f2\Editor\Unity.exe'. Below the path are three platform tags: 'Android', 'Web', and 'Windows'. To the right of the entry is a 'Manage' button with a dropdown arrow.

Validation Rules

Issues (5) of Checks (11) ☐ Show all ☐ Ignore build errors Fix All

 [OpenXR] At least one interaction profile must be added. Please select which controllers you will be testing against in the Features menu. Edit

 [OpenXR] The project's minimum Android API level is lower than 24, which is the lowest level supported by the OpenXR plug-in. ? Fix

 [OpenXR] [Optional] Switch to use InputSystem.XR.PoseControl instead of OpenXR.Input.PoseControl, which will be deprecated in a future release. Fix

 [OpenXR] [Optional] Switch to use StickControl thumbsticks instead of Vector2Control, but may break existing projects that have code dependencies to the Vector2Control type. StickControl allows more input options for thumbstick-based control, such as acting as both a combined 2D vector, two independent axes or a four-way Dpad with 4 independent buttons. Fix

 [XR Plug-in Management] Run In Background must be enabled or Input System Background Behavior changed to avoid head-locked rendering of the main camera when focus is lost, such as when the universal menu/system shell is opened. Fix

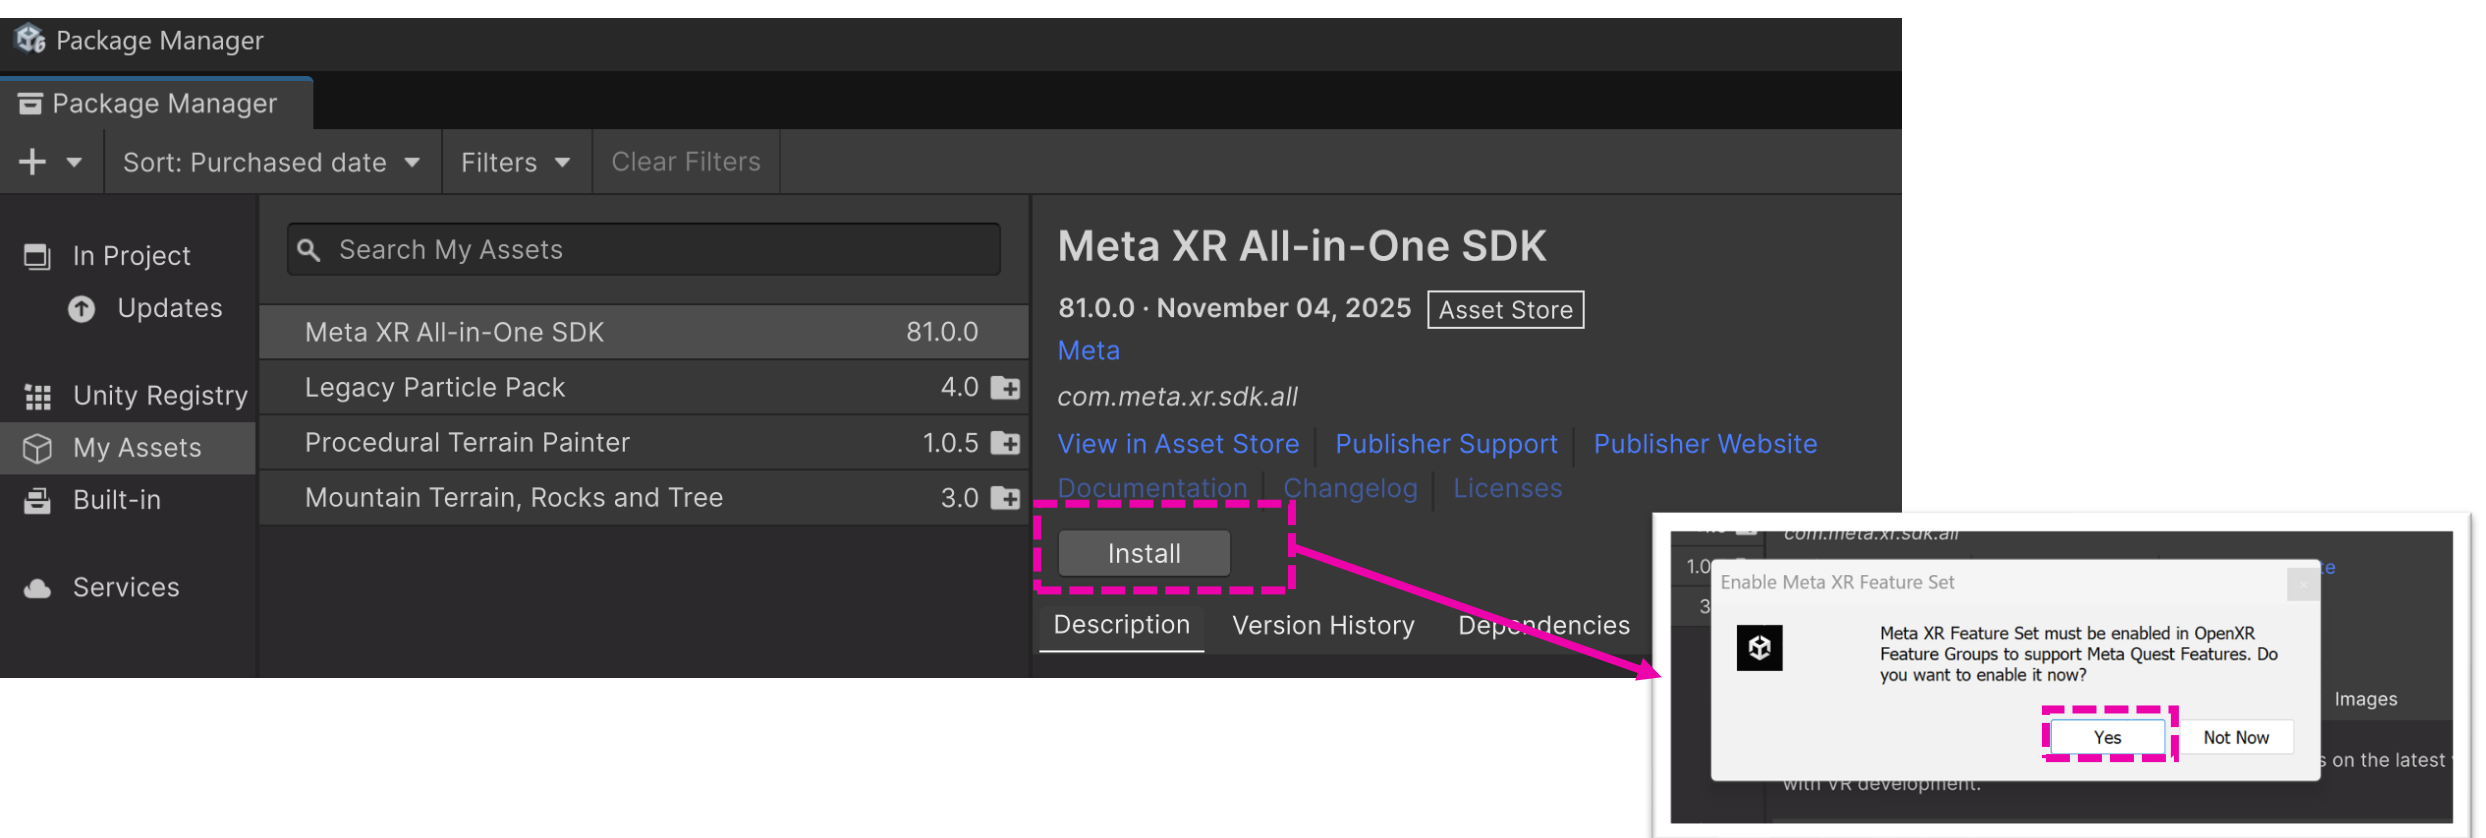

빌드 설정

- File -> Build Profiles
 - Meta Quest를 Enable

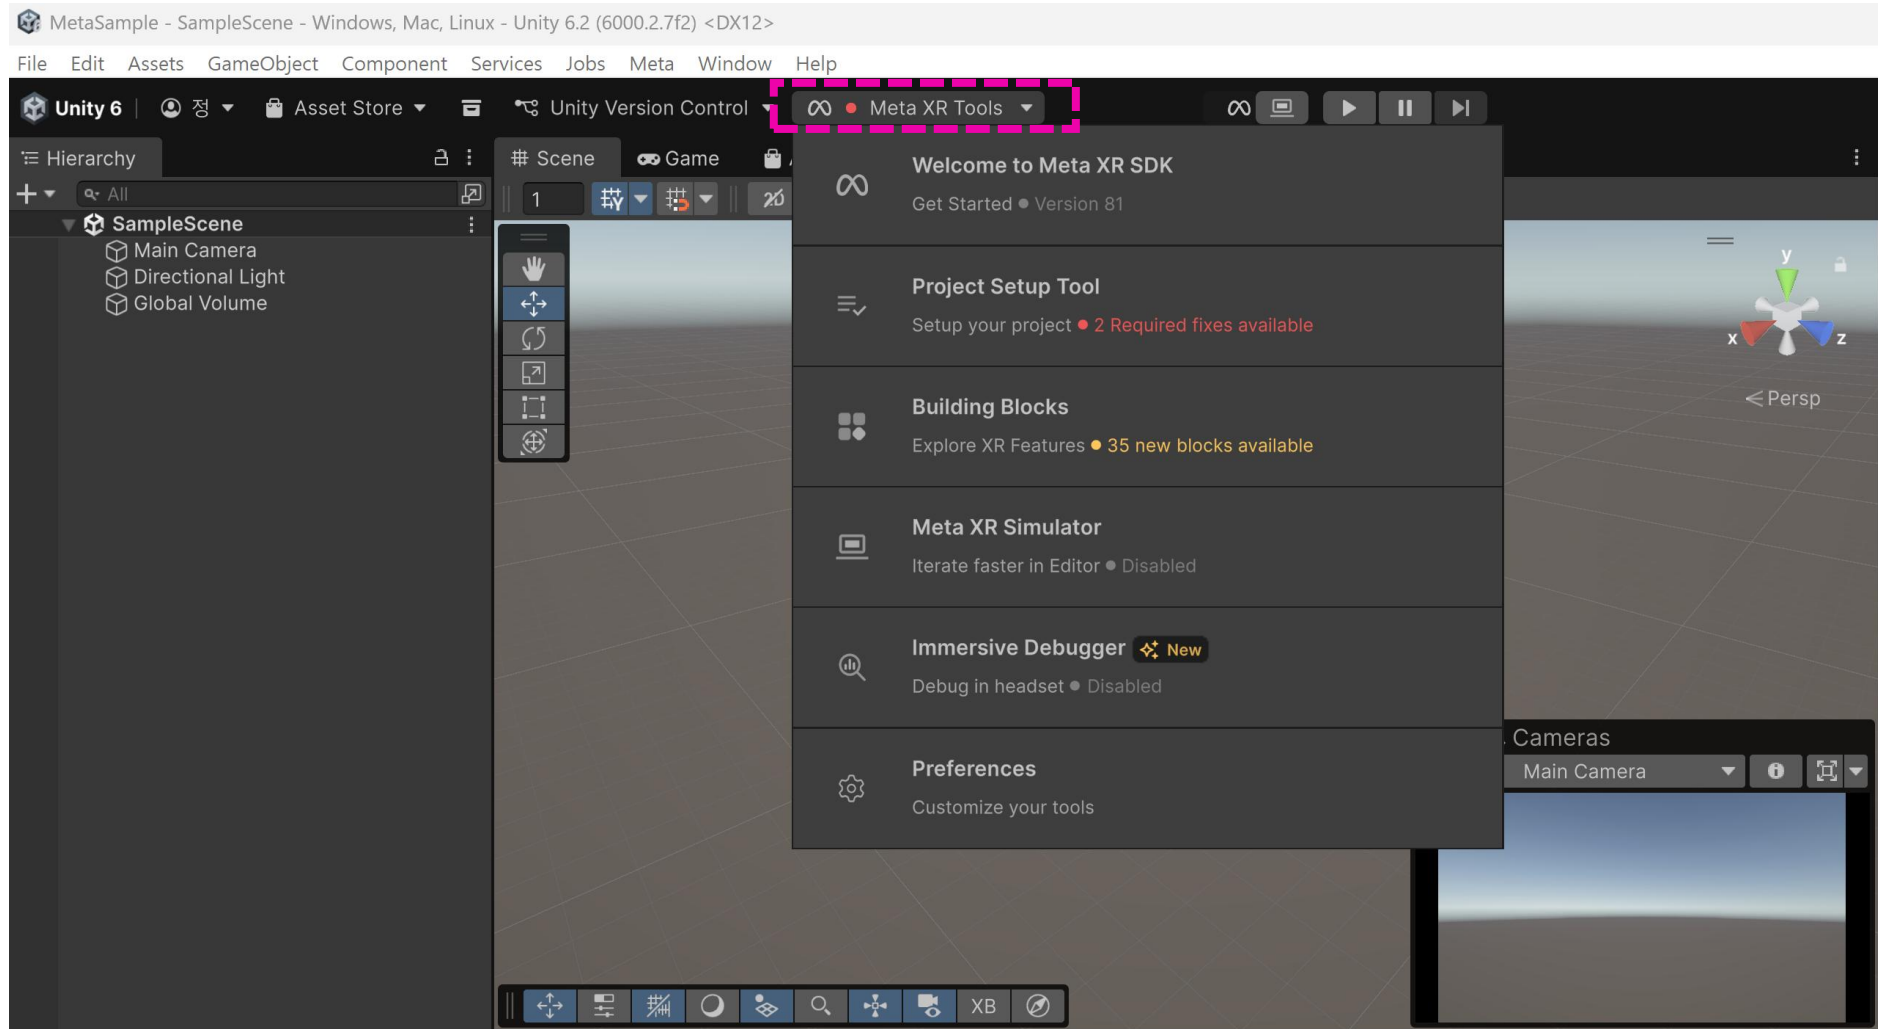

패키지 설정

- Window -> Package Manager
 - Meta XR All-in-One SDK를 Install
 - Meta XR Feature Set은 Enable로

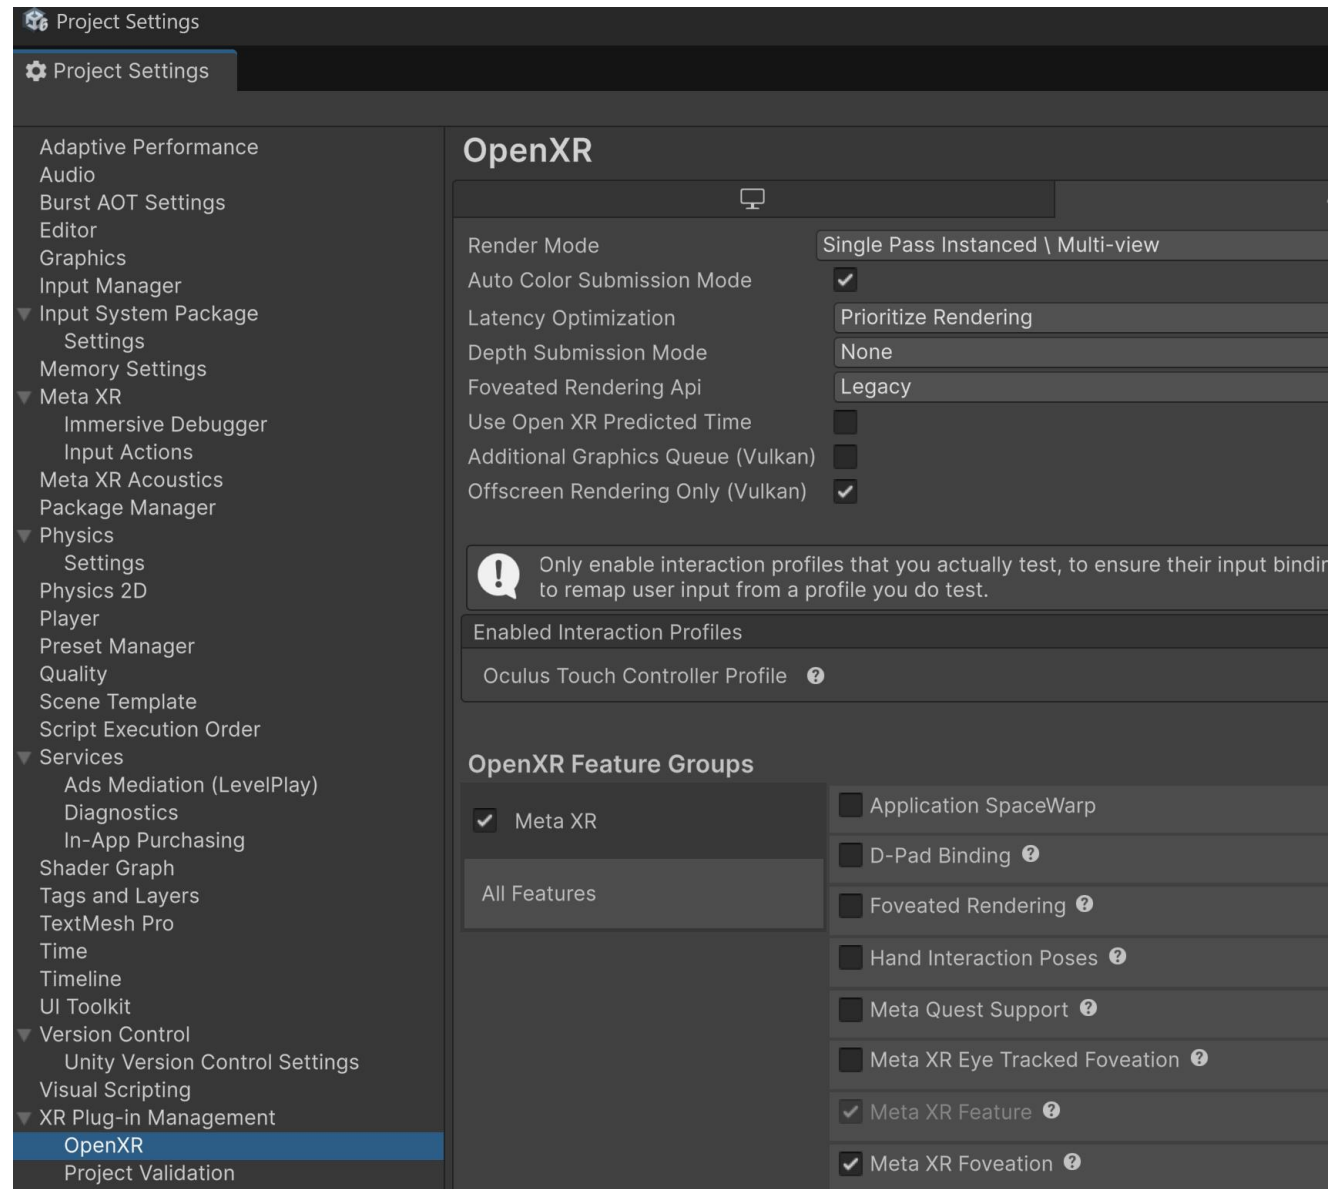

Meta XR Tools

- 빌드 관리, Building Blocks 추가 가능

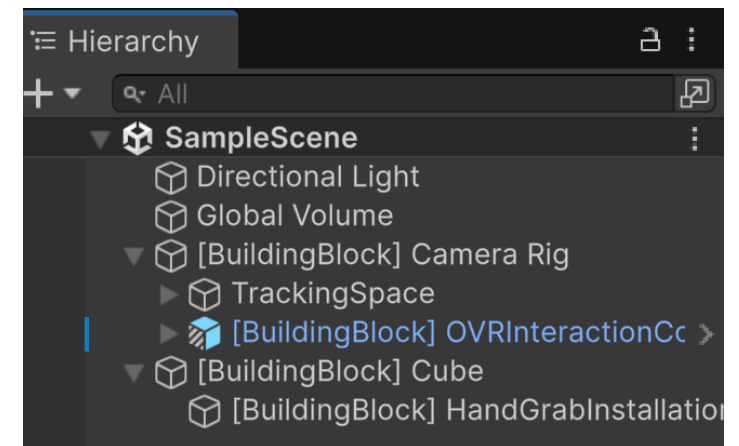

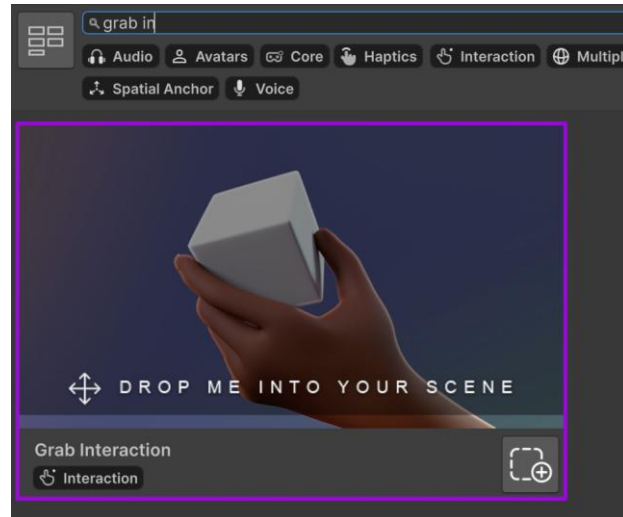

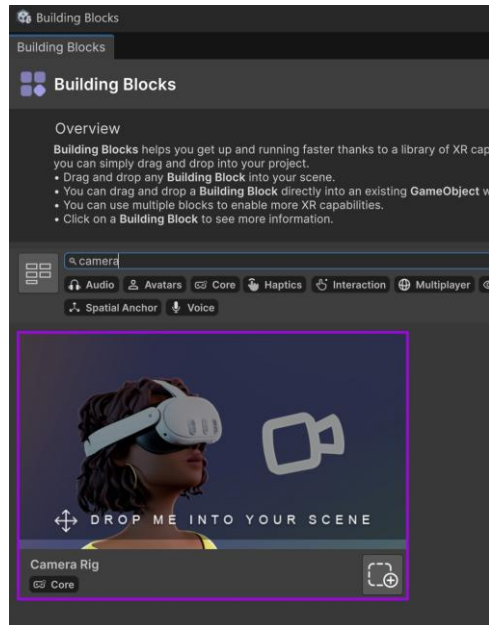

OpenXR Feature

- 확인

프로젝트 수정

- Main Camera 제거
- Meta XR Tools > Building Blocks
 - Camera Rig 추가
 - Grab Interaction 추가 (Optional)

메타 퀘스트에서

- USB 디버깅 허용 설정
